

# README – External data track

Community Hubs are hosted in schools to provide a range of activities for children and adults. Some examples are English lessons, maternal and child health, and playgroups.

The external track uses external (public) information to answer the question: **Where should CHA consider opening new hubs?**

The file ***Hub locations*** has the specific coordinates and name of each hub. More information about the Hubs can be found on the [CHA website](#).

We have also compiled some useful publicly available datasets. We encourage you to use them to solve the proposed problems. Feel free to use one or more of the files provided and/or to find new sources of data on the web.

- ***PHIDU Social Health Atlas by LGA*** ([source](#)), contains valuable information on demographics per LGA. It is based on census data and other social sector databases.
- ***School Profiles*** ([source](#)), contains information on school locations, sizes and demographics since 2008.
- ***Australian Early Development Census (AEDC) time series*** ([source](#)), contains information on child development since 2009.
